Data Virtualization (DV) is a data integration technology for Business Intelligence. Although it has been around for more than 20 years, it is only now that more and more corporations are starting to use it as a workaround to Extract-Transform-Load (ETLs) and data warehousing in areas such as Business Intelligence Analytics (BIA), application development and Big Data.

Data virtualization is any approach to data management that allows an application to retrieve and manipulate data without requiring technical details about the data and can provide a single customer view (or single view of any other entity) of the overall data. Data virtualization is considered to be an alternative to data warehousing and ETL. Unlike the ETL process, the data remains in place, and real-time access is given to the source system for the data. This reduces the risk of data ...
